

```
import matplotlib.pyplot as plt
import numpy as np
```

a. Write a Python program to create a scatter plot of Age and Height of 5 students.

```
x = np.array([15,20,7,19,20])
y = np.array([5.2, 4.0,6.0,5.9,6.3])
plt.scatter(x, y)
plt.show()
```

b. Write a Python program to create a bar chart showing marks of 5 students.

```
x = np.array(["A", "B", "C", "D"])
y = np.array([3, 8, 1, 10])

plt.bar(x,y)
plt.show()
```

c. Write a Python program to create a histogram showing the distribution of marks of 10 students.

```
marks = [45, 67, 78, 56, 89, 72, 91, 63, 55, 80]

plt.hist(marks, bins=5, edgecolor="black")

plt.xlabel("Marks")
plt.ylabel("Number of Students")
plt.title("Distribution of Marks of 10 Students")
```

```
Text(0.5, 1.0, 'Distribution of Marks of 10 Students')
```

D. Write a Python program to create a pie chart showing the number of

```
courses = ["BSc IT", "BCA", "BSc CS", "BBA"]
students = [40, 30, 20, 10]
plt.pie(students, labels=courses, autopct="%1.1f%%")
plt.title("Number of Students in Different Courses")
plt.show()
```

Number of Students in Different Courses

5. **Write** a Python program to create a bar chart horizontal showing sales of 5 different products.

```
products = ["Product A", "Product B", "Product C", "Product D", "Product E"]
sales = [500, 700, 450, 800, 600]
plt.barh(products, sales)
plt.xlabel("Sales")
plt.ylabel("Products")
plt.title("Sales of 5 Different Products")
plt.show()
```
